Packaged Gases: Changes in the past 25 years

- **Why 25 years ?**
- **A number of reasons.....**
 - **Period of great change**
 - **Technically**
 - **Operationally**
 - **Legislatively**
 - **Customer Focus**
 - **Industry consolidation**
 - **Role of the trade Associations**

Some History up to 1980.....

AIGA

- **Gas Cylinders had not changed very much since the first patent in 1886**
- **Slow and steady changes in steel quality**
- **More sophisticated design formulae**
- **Aluminium Cylinders arrived in commercial quantities in the 1960s.**
- **Composite cylinders in specialist applications**

Patent Picture to be added

Cylinder Efficiency

The AIGA logo consists of the letters "AIGA" in a bold, white, sans-serif font, centered within a solid blue square.

- How do you measure the efficiency of a cylinder?
- No agreed measurement
- Not just pressure or weight but a ratio
 - Some use M^3/kg
 - Others Kg/M^3
- Preferred method for AP is Kg/M^3

Cylinder Efficiency to 1980s

AIGA

Graph to be added

Cylinder Efficiency to 2000

AIGA

Graph to be added

So what happened (1)

AIGA

- A number of changes
 - Improved steels
 - New Aluminium Alloys
 - Design Formulae Changes
- However, a cylinder is still heavy

So what happened (2)

AIGA

- Composite Cylinders arrived in commercial quantities
- Three main types
 - Hoop Wrapped
 - Fully Wrapped
 - NO line

Composite pictures to be added

Improved Efficiency Why Important?

- Improved efficiency means less cylinders and less vehicles
- Reduced deliveries
- Reduced number of fill cycles

Decreased Weight & Increased Pressure

- Both lighter and light weight cylinders were now available.
- Gas Companies were buying cylinders for 300 Bar and building facilities for 300 Bar
- Great.....but hold on !!!!!!!!!!!

Drawing to be added

What is the problem??

The AIGA logo, consisting of the letters "AIGA" in white, bold, sans-serif font, set against a blue square background.

- **300 Bar is not really much use to a user or for that matter neither is 200 Bar**
- **To help the customer need to supply the pressure that the customer needs.**
- **Led to the development of Cylinder Valves with Integrated Pressure Regulators (VIPRs)**

Valves with Integrated Pressure Regulators

Pictures of VIPRS

And if you put them together.....

The AIGA logo, consisting of the letters "AIGA" in white, bold, sans-serif font, set against a solid blue square background.

and VIPRS

The AIR PRODUCTS logo, featuring the words "AIR" and "PRODUCTS" in a bold, green, sans-serif font, followed by a stylized green graphic element resembling a lightning bolt or a series of connected triangles.

Operational Changes

AIGA

- **Palletisation**
 - Filling
 - Transport
- **Distribution Methods**
 - Small Bulk
- **Supply Chain**

**AIR
PRODUCTS** 

Legislation

The AIGA logo consists of the letters "AIGA" in a bold, white, sans-serif font, centered within a solid blue square.

In 1980 Cylinder Legislation in Europe was a mess.

Each Country had its own approval authority for new cylinders and retested cylinders

A cylinder could be “illegal” if you took it across the road

Lets look at the map.....

Europe/Asia

Map to be added

What was happening?

AIGA

- **Not very much in 1980.....**
 - **ISO standards were being written but only adopted as National Standards in a few countries**
- **But then in early 1980s.....**
 - **“Pressure” from a number of areas.....**
 - **European Union**
 - **Gas Companies**
 - **Cylinder and Valve Makers**

The Result

The AIGA logo consists of the letters "AIGA" in a bold, white, sans-serif font, centered within a solid blue square.

- **By 2005 the disappearance of National Cylinder Standards in Europe**
- **Replaced by one set of common standards across the European Union**
- **Now being replaced by International Standards.....ISO**
- **Legislation to permit the free movement and use of gas cylinders across Europe.**

The Bigger Picture

AIGA

- **We need to have a global approach to cylinder use**
- **ISO is one step**
- **UN Mark is another, recently permitted approval that enables free transport, but not use.**
- **Singapore leads.....**

Picture of a UN
Marked cylinder

Harmonisation

The AIGA logo is a blue square with the white text "AIGA" inside.

- **Benefits**
 - **Safety**
 - **We are all using the same set of rules**
 - **Rework is reduced**
 - **Better use of assetts**
- **Disadvantages**
 - **Very Few**
 - **Some loss of flexibility at a National Level**

Harmonisation Examples

AIGA

- **Bundle test**
 - **Harmonised Standard**
 - **Bundle has to withstand 1.2 metre drop and not leak**
 - **Heavier design**
 - **Does not leak or suffer so much operational damage**
 - **Overall benefit**
 - **Level playing field**

ISO/DIS 11755

**AIR
PRODUCTS** 

Harmonisation Examples

AIGA

- **Drop Test of Valve Protection**
 - To an agreed set of parameters
 - Ensure consistency across all designs
 - Safety is ensured

ISO 11117

AIR
PRODUCTS 

Harmonisation Examples

AIGA

- **Adiabatic Testing of Cylinder Valves**

- Ensure valves meet a minimum service criteria
- Consistency
- Safety

PRODUCTS** 

Legislative Changes on Supply

AIGA

- **Medical Gases**
 - **Twenty Five years ago little different to an industrial gas**
 - **Today highly regulated across the US and European Union**
 - **Separate filling areas**
 - **Demands on analysis and traceability**

Picture of fill area

**AIR
PRODUCTS** 

Legislative Changes on Supply

AIGA

- **Food Gases**
 - **As with Medical Gases**
little regulation twenty
five years ago
 - **Whilst not at the level**
of medical gases expect
to see this change
 - **Looks as if it will end**
up close to medical
gases

Food gases picture

Trade Associations

Trade association logos

Role of Trade Associations

The AIGA logo consists of the letters "AIGA" in a bold, white, sans-serif font, centered within a solid blue square.

- **Very Important**
 - **Continue to undertake the role of a ‘learned society’**
 - **In Europe, over the past twenty five years a focal point for the Authorities to talk to**
- **Many Examples in Europe**
 - **Asbestos in acetylene cylinders**
 - **Lead in brass cylinder valves**

Challenges for Asia

The AIGA logo, consisting of the letters "AIGA" in white, bold, sans-serif font, set against a blue square background.

- **Asia position is similar to Europe twenty five years ago**
- **Opportunities to move in a similar direction to Europe**
 - **No need to be as slow or make the same mistakes**
 - **Need to be rigourous in the application of rules**

Challenges for Asia

The AIGA logo is a blue square with the white text "AIGA" inside.

- **Cylinder Ownership**
 - **Need to have clear policies and processes on cylinder ownership**
 - **Ensure a set of rules are followed by AIGA members**
 - **Lobby National Governments to ensure legislation is introduced and enforced to protect cylinder owners**

The Next Twenty Five Years

The AIGA logo, consisting of the letters "AIGA" in white, bold, sans-serif font, set against a blue square background.

- Some Packaged Gases Predictions
 - There will be truly global cylinders, no National Boundaries
 - Charging Pressures will have increased across the globe to be up to 500 Bar
 - Composite cylinders will be very common
 - Cylinders will be produced in a different manner

Twenty Five Years of Change
